

# Pre-Kindergarten Curriculum

## Why is it so important to invest in early education?

While Common Core Standards are priming school-aged children to be College & Career Ready, early education is preparing preschoolers for the primary school learning environment.

Given the rigor of the Common Core, it is vital that children come to Kindergarten with foundational skills in place, or they walk into their first day with a deficit.

### Voiceover Support for Early Reading Skills

Automatic voiceover assists with early reading skills, pronunciation, and modeling of good reading habits.

### Developmentally Appropriate for Pre-K

The **BrightStrides** curriculum for Pre-K is built to be developmentally appropriate for the preschool level, while mirroring Common Core standards that are taught in Kindergarten.

### Written by Certified Teachers

**BrightStrides** delivers practice and instruction for ages 3-5 on foundational math and reading skills, such as identifying and using letters, shapes, and numbers.

### Rich, Visually Engaging Content

The content is bright and engaging with colorful graphics, cartoons and real-life photos to capture preschoolers' attention.

# BrightStrides for Pre-K is a highly effective model that delivers small group and one-on-one learning opportunities.

Our curriculum is educational and practical, not just a way to fill the time.

## Web-based to Engage Children in Technology, Anytime and Anywhere

Early practice on computers and tablets introduces technologies that preschoolers will encounter in primary school. Online accessibility, 24/7, enables them to work in **BrightStrides** at preschool, home or anywhere.

## Video Lessons Encourage Skills Application in Everyday Tasks

Brief video lessons show real teachers and students in a classroom, working together on key reading and mathematics skills.

These lessons provide a glimpse of classroom structure, while encouraging independent thinking, exploration and application of these skills in home life and everyday tasks.

## Engaging Games Create Excitement around Learning

Through the positive reinforcement of engaging video games, preschoolers discover that learning is fun and rewarding!
